PROFESSIONAL SUMMARY

Electronics and Communication Engineering student (B.Tech, expected 2027) with hands-on IoT experience across ESP32 firmware, sensor interfacing, MQTT telemetry, and ThingsBoard dashboards. Completed an IoT internship building an Edge AI-based EV charging station optimizer, with additional exposure to AWS cloud services and solar PV installation. Seeking an IoT / embedded systems role.

EXPERIENCE

IoT Intern – Emertxe *Aug 2026 – Sep 2026*

- Completed an IoT internship (NSDC / ESSCI-affiliated), building an Edge AI-based Smart EV Charging Station Optimizer as the capstone project.
- Developed ESP32 firmware in embedded C/C++ using PlatformIO and VS Code, and simulated circuits in Wokwi.
- Worked with MQTT and ThingsBoard for device telemetry, shared attributes, and remote RPC control.

Solar PV Installer (Suryamitra) Intern – Datapro Computers Pvt. Ltd. *Jun 2026 – Aug 2026*

- Trained with the National Institute of Solar Energy (NISE) under the Suryamitra programme; assisted in solar PV installation and panel mounting.
- Performed wiring, inverter and battery basics, testing, and maintenance while following electrical safety standards.

Cloud Computing with AWS Intern – Beeskilled *May 2026 – Jun 2026*

- Configured and managed AWS resources including EC2, S3, IAM, VPC, Lambda, API Gateway, and RDS.
- Worked on cloud deployment, networking, security, and resource provisioning through practical projects.

PROJECTS

Edge AI-Based Smart EV Charging Station Optimizer *ESP32, MQTT, ThingsBoard, Wokwi, PlatformIO*

- Built a simulated multi-bay EV charging station where each ESP32 bay senses voltage, current, and temperature (DHT22), detects plug-in/plug-out events, and shows status on LEDs.
- Published bay telemetry as JSON to ThingsBoard over MQTT and received station limits (max load, overload current, peak-tariff window) through shared attributes.
- Implemented RPC commands (setRelayState, setThrottle) so operators can manually override a bay from the dashboard.
- Applied on-device Edge AI demand prediction with ALLOW / THROTTLE / DEFER logic to manage station load during peak demand.

IoT-Based Smart Medicine Dispenser *Automated scheduling & real-time monitoring*

- Developed an IoT dispenser that schedules and dispenses medicine automatically, with sensors and alerts to detect missed doses.
- Designed a web dashboard for real-time monitoring and alarm management.

IoT-Based Drunk and Drive Detection Notification System *MQ-3 sensor, Wi-Fi, Telegram*

- Detected alcohol levels with an MQ-3 sensor and triggered LCD, buzzer, and LED alerts.
- Sent real-time Telegram notifications over Wi-Fi to support road safety.

AWS Infrastructure Automation Project *CloudFormation, CodePipeline*

- Automated AWS provisioning with CloudFormation and built CI/CD workflows with CodePipeline for consistent deployments.
- Configured EC2, VPC, IAM, S3, Lambda, API Gateway, and RDS to build secure, scalable cloud environments.

SKILLS

IoT & Embedded: ESP32, Arduino, Embedded C/C++, Sensor Interfacing (DHT22, MQ-3, analog inputs), MQTT, ThingsBoard, Edge AI Concepts, Wireless Communication, Digital & Analog Electronics
Cloud & DevOps: AWS (EC2, S3, IAM, VPC, Lambda, API Gateway, RDS), CloudFormation, CodePipeline, CI/CD
Core Subjects: C Programming, Microprocessors & Control Systems, Digital Electronics, Circuit Theory, Data Communication & Networks, Basic Electronics, Instrumentation
Tools: PlatformIO, VS Code, Wokwi, Tinkercad, Postman, GitHub, AWS Management Console, Microsoft Office
Solar PV: Solar PV Installation, Panel Mounting, Inverter Basics, System Inspection & Maintenance

EDUCATION

B.Tech, Electronics and Communication Engineering – CGPA: 7.6/10 *Jul 2024 – 2027 (Expected)*
Sree Chaitanya College of Engineering

Diploma, Electronics and Communication Engineering – CGPA: 8.6/10 *Sep 2021 – Mar 2024*
Jyothishmathi Institute of Technology and Science

CERTIFICATIONS

- Internet of Things (IoT) – Emertxe
- Cloud Computing with AWS – Beeskilled
- Solar PV Installer – Datapro Computers Pvt. Ltd.
